

The Hybrid-35MF is a compact and versatile device that uses the COMBEX technology developed for its counterpart the Hybrid-45MF. Despite its smaller size, it generates an impressive output of 35,000 BTU. The ingenious door overlay that has earned fame for the Osburn brand is also available for the Hybrid-35MF. Its electronic interface, located on top of the stove, allows you to control the settings without having to reach down.

OSBURN HYBRID-35MF
